

# ENDURA-FORM

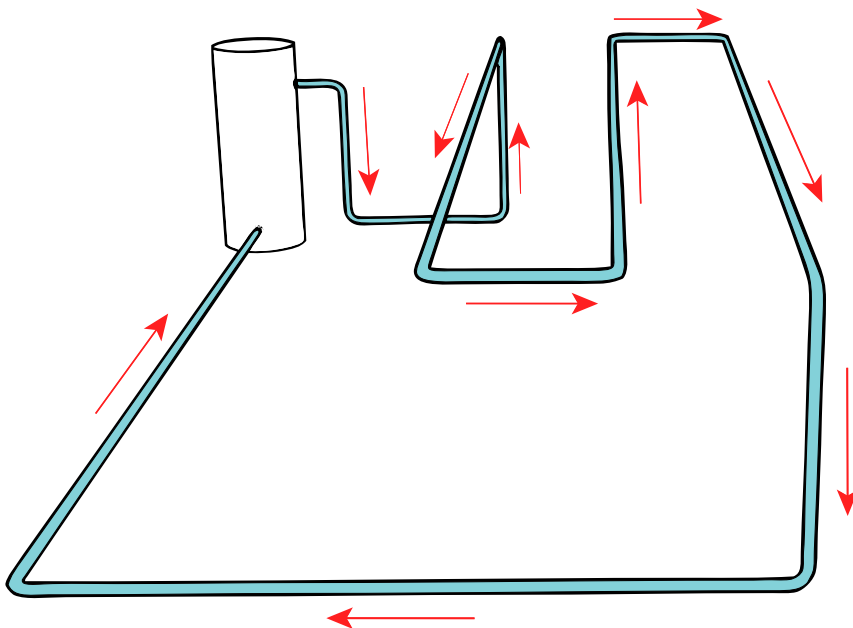

MULTI PURPOSE CONSTRUCTION PANELS BY T&R INDUSTRIES

## Horticulture Application - Panel Heating

Pipes are run through the Endura-Form panels while they are placed on the ground or raised on supports. Heated water is passed through the panel pipes and heat is radiated efficiently to the plants, maintaining even temperature and using energy efficiently.

This drawing illustrates one of the many possible configurations for using Endura-Form panels in an horticultural application. The hot water pipes are shown in blue.

This drawing is the view as above but showing only the water pipes and flow direction (red arrows) The water pipes are shown in blue. This is for illustration purposes only
